# Secure and Manage Your Cloud Transformation

Businesses undergoing transformation initiatives have embraced the cloud as a primary vehicle to deliver modern, digital services. And while the cloud has proven to accelerate the development, innovation, and scalability of new and existing apps, it has also created unplanned challenges. Despite significant investment and focus, modern organizations find themselves stuck 'mid-transformation', managing fragmented hybrid and multi-cloud environments as cost and risk profiles rise.

## OUR NEW CLOUD REALITY

### Multi-Cloud Is the Norm

**98%** of enterprises already deploy multi-cloud architectures.[1]

### Cloud Strategies Are Lacking

**69%** of leaders don't have a clearly defined cloud implementation strategy.[2]

### Bad Actors Are on the Rise

Adversaries targeting cloud environments have increased **288%** year-over-year.[3]

## GET CLOUD RIGHT

Success in today's world requires a paradigm shift. Rather than traversing diverse locations to manage applications on an environment-by-environment basis, businesses need centralized protection and control that eliminates silos and mitigates risk. From ground to cloud, Presidio and F5 offer a streamlined approach to securing and managing critical applications—wherever they run. Get centralized management, simplified control, and consistent security across traditional and cloud-native apps.

## Presidio + F5 Distributed Cloud Services

**Simplify management across disparate environments.**

**Consolidate governance, control, and monitoring.**

**Minimize cyber risk and application exposure.**

**Reduce costs and decrease tech debt.**

# Protect Apps

Apps are the engine that run your business. And they all need protection. Presidio, with F5 Distributed Cloud Services, improves your security posture to safeguard apps and APIs from threats and malicious bad actors. Now you can improve visibility, enforce standard configurations and policies, and effectively defend against a broad spectrum of advanced cyberthreats, including OWASP Top 10, DDoS, malicious bots, and zero day.

### Web Application Firewalls (WAFs)
Protect apps with full proxy inspections to mitigate attacks and exposures.

### DDoS Protection
Shield critical infrastructure from L3-L4 volumetric and L7 denial-of-service attacks.

### API Protection
Discover and safeguard unmanaged, unsecured, or exposed APIs from threats.

## CUSTOMER CASE STUDY:
### Securing Apps from Persistent Threats

#### NEED:
A large corporation required consistent protection across their disparate web assets.

#### SOLUTION:
Presidio + F5 Distributed Cloud Services delivered a single platform to minimize risk and keep apps running.

#### RESULT:
- Expanded security for critical web assets.
- Extended protections across data centers, cloud, and the regional edge.
- Reduced friction and accelerated app delivery.

# Drive Availability and Performance

The world of digital services is ultra-competitive. Customers and employees are so dependent on digital services and cloud tools that productivity is severely impacted if access is disrupted. Presidio and F5 make it possible to deliver highly differentiated and performant digital experiences your users expect. This means deploying resilient applications with the right underlying infrastructure, security, and networking services to keep applications available and performing for your legitimate users.

### Geo-Location Load Balancing
Intelligently direct traffic based on nearest instance, compliance requirements, or availability.

### Disaster Recovery
Automatically detect site or application failures and get zero-touch failover.

### Best-in-Class Security
Safeguard web apps and APIs with built-in, layered security.

# Cloud Cost Optimization

The escalating cost of cloud puts pressure on IT teams to rein in consumption and institute better governance. By leveraging F5's single, consolidated SaaS-platform, Presidio lowers the reliance on point products and cloud-native tools. This reduces complexity and eliminates the need to support underlying infrastructure while driving consistent and simplified management across applications and disparate environments.

### SaaS Platform
Simplify security across data centers, clouds, and edge with ease.

### Single Console Management
Centralize management to eliminate reliance on point products and cloud-native tooling.

### Marketplace Ready
Utilize committed cloud spend to purchase F5 solutions through respective AWS, Google Cloud, and Azure marketplaces.

## CUSTOMER CASE STUDY:
### Expanding Cloud Vision with SaaS Security

**NEED:**
A regional credit union needed a cloud-forward and economical approach to app protection.

**SOLUTION:**
Presidio + F5 Distributed Cloud Services transformed app security while fulfilling cloud initiatives.

**RESULT:**
- Extended protection across apps via a single SaaS platform.
- Reduced costs and infrastructure expenses.
- Consolidated vendors and eliminated point products.

# Accelerate Transformation with Presidio and F5

Presidio and F5 deliver what you need to unstick your digital transformation and accelerate ROI in the cloud. Together, we bridge the gap with modern application and network security from a single SaaS-based platform. The result? Future-proof protection and management that's proven to help you overcome multi- and hybrid-cloud complexity.

## PRESIDIO IS FULLY CERTIFIED AND ACCREDITED FOR ANY F5 SOLUTION

| Global footprint, doing business in 100+ countries | 600+ joint customers with F5 | 75+ dedicated security professionals with 250+ accreditations | F5 Unity+ Platinum Partner |

## F5 Distributed Cloud Services

F5 Distributed Cloud Services are SaaS-based security, networking, and application management services that enable customers to deploy, connect, and secure modern apps and APIs in any environment—from core to cloud to edge. It's built on a single platform for centralized management, complete visibility, and consistent policies everywhere. It also provides a global backbone for high performance connectivity and a cloud mesh to seamlessly and securely connect edge sites.
